PreVISION® Temp

Reliability in temporary restorations.

More safety for you and your patients.

Temporary restoration of prepared teeth is a key component in the process of crown and bridge fabrication. It not only offers protection for the tooth, but also allows the patient to get an impression of the permanent restoration. With PreVISION Temp, you provide your patients with a solid and also highly aesthetic provisional.

Convincing performance

PreVISION Temp combines ideal mechanical properties with high aesthetics. The practical 10:1 auto-mix cartridge makes its application easy and fast. Due to its high fracture toughness and fracture strength PreVISION Temp provides you with a solid and fracture-proof temporary restoration.

Its superior polishability results in a particularly smooth surface, enhancing the patient's comfort and preventing the accumulation of plaque. As an additional benefit, PreVISION Temp is fluoride-releasing and therefore supports the prevention of caries.

PreVISION Temp's pleasing aesthetics and convincing functionality allow the patient to envision a representation of how the final restoration will look and feel.

PreVISION Temp – Not permanent but reliable

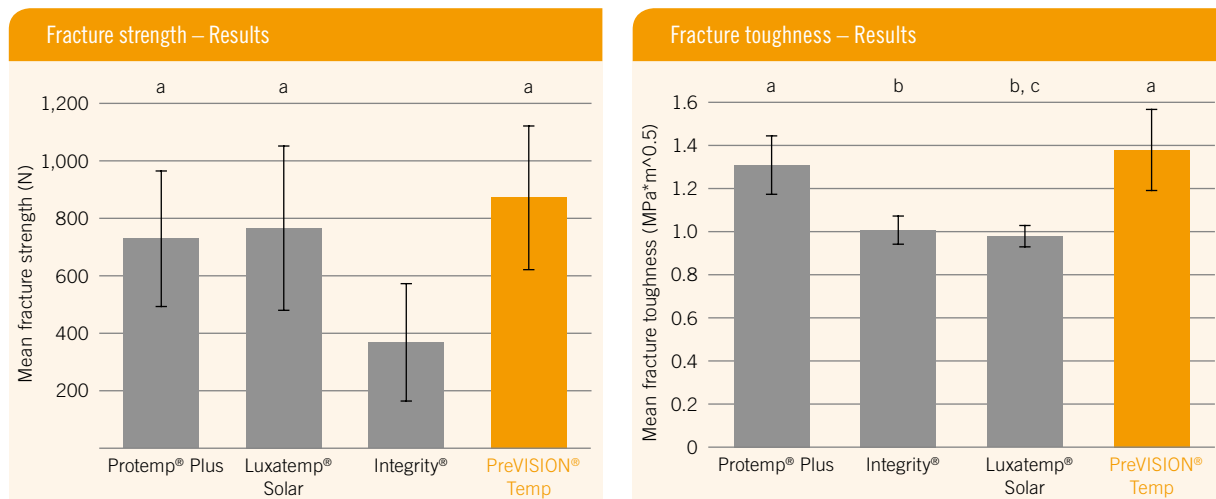

- **Temporaries made easy:** PreVISION Temp is indicated for the fabrication of temporary crowns and bridges, inlays, onlays, veneers and long-term temporaries. It impresses through its ease of application and optimal handling properties. The practical auto-mix cartridge ensures a constant homogeneity of the material.
- **Temporaries made to please:** Its wide colour range and the excellent polishability make provisionals with PreVISION Temp highly aesthetic. The six shades are perfectly matched to Venus Diamond Flow flowable composite, ideally suited for individual characterisation and small repairs.
- **Temporaries made to perform:** The ideal mechanical properties make temporaries with PreVISION Temp durable and fracture-proof. This ensures a comfortable wearing time until the permanent restoration is inserted.

The resistant provisional for aesthetic standards.

Impressive benefits.

PreVISION Temp is a self-curing two-component temporary crown and bridge material. Its good mechanical properties allow for safe and aesthetically convincing results for a comfortable wearing time.

PreVISION Temp's high fracture toughness and excellent fracture strength ensure a stable and fracture-proof provisional.

Optimise your workflow and combine our products. That's why we developed them. For instance, to be optimally equipped for the fabrication of a temporary use xantasil, our alginate substitute, for the preliminary impression. With our experience and wide range of products, we support you in your daily work.

PreVISION Temp

50 ml Cartridge, 12 Mixing Tips, Pictorial Card

Shade	Art. code
A1	66055526
A2	66055527
A3	66055528
A3.5	66055529
B1	66055530
BLEACH	66055531

xantasil® – Impressively convenient.

xantasil – The alginate substitute adapting to your workflow. Not vice versa.

For your flexibility: The long-term dimensional stability also provides you with a later and repeated pouring without time pressure.

For your comfort: The impression is more convenient for patient and dentist due to its hygienic processing, short time in the mouth and reusability.

For your routine: The especially fast automatic mixing with the Dynamix speed ensures an excellent and reproducible mixing quality.
